IT WORK

I provide professional Linux system administration with a focus on reliable operations, open-source tooling, clear documentation, and data sovereignty.

I am available for focused IT infrastructure support.

SKILLS

Linux | Docker | Nginx | DNS / TLS | Backups | Monitoring | Shell | Documentation | Networking | Open source

EXPERIENCE

IT - Linux system administration

I handle updates, access, services, logs, and operational notes.

Operations - Open-source infrastructure

I work with Nginx, TLS, DNS, containers, and maintainable service boundaries.

Continuity - Data ownership and recovery

I document backups, restore paths, runbooks, and troubleshooting.

HIGHLIGHTS

Linux Service Stack

I build with Docker Compose, reverse proxies, TLS, and service isolation.

Open-Source Web Operations

I maintain Nginx, DNS, redirects, certificates, and deployment notes.

Data Sovereignty Practices

I make ownership-aware choices for storage, access, backups, and recovery.

Operational Cleanup

I review config, update routines, logs, and documentation.

TRAINING

Linux Administration Foundations

Details to confirm.

Docker and Compose Operations

Details to confirm.

Networking and Web Delivery Basics
